

The Dirty B

POWER: 9V battery or 9V power supply not exceeding 200ma, battery access is through the four screws on the back plate

POWER ADAPTER: Negative Center - Positive Ring
After many years of repairing damage from mediocre power supplies, Menatone now only recommends **Voodoo Labs Pedal Power supplies.**
Use all other supplies at your own risk!

Controls:

gain: adjusts the overall level of distortion.

soul: sets the compression of the overdrive. higher settings will have more saturation. Control may be a bit scratchy sounding when turning, this is normal

treb: adjusts the high frequencies

mid: boost and cuts midrange. Set above noon for a bluesy fat overdrive

bass: turn up for fat, and loose bottom below noon will tighten up the lower frequencies.

vol: sets the output level. careful this pedal can hit hard!

Internal Dip Switches

AMP MATCH

These switches offer different levels of treble cut. Both off is the brightest setting. Factory setting is switch 2 on.
