

DUMBSTRUCK

power: 9V battery or 9V power supply not exceeding 200ma, battery access is through the four screws on the back plate

power adapter: Negative Center - Positive Ring
After many years of repairing damage from mediocre power supplies, Menatone now only recommends

Voodoo Labs Pedal Power supplies.

Use all other supplies at your own risk!

This pedal is internally voltage doubled
daisy chaining is not recommended

Controls:

gain: adjusts the overall level of distortion.

harmonic content: adjusts the level of harmonic saturation. Turning up will produce fuller, richer tones with more sustain.

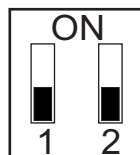

accent: adjusts the amount of pick attack in the saturation

push: boosts and cuts midrange. Set above noon for more midrange gain and sustain

reso: turn up for fat, and loose bottom
below noon will tighten up the lower frequencies.

level: sets the output level. careful this pedal can hit hard!

INTERNAL DIP SWITCHES

AMP MATCH

These switches offer different levels of treble cut. Both off is the brightest setting. Factory setting is switch 2 on.
