

Top Boost in a Can vertical

POWER: 9V power supply not exceeding 200ma,
no battery. Daisy chaining is not recommended
This pedal is internally voltage doubled to 18v

POWER ADAPTER: Negative Center - Positive Ring
After many years of repairing damage from mediocre power
supplies, Menatone now only recommends
Voodoo Labs Pedal Power supplies.
Use all other supplies at your own risk!

The Top Boost in a Can is two independent pedals in one box.
The Boost is first in the signal path, then
the Top Boost circuit. Both can be used individually
or at the same time.

Controls: Boost

Boost: this is a full range boost from unity to about +12db

Top Boost

gain: adjusts the overall level of distortion.

treble: adjusts the treble frequencies

bass: adjusts the bass and midrange levels.

When turned up the midrange levels drop

hi cut: cuts treble at the end of the circuit when turned up.

level: sets the level of volume for the tbiac circuit

sag: introduces bass content in the final gain stage for a less
tight feel.

internal trim pot: this is a treble cut to help match the pedal
to you amp. works only on the tbiac side
